

EARLYPOLY OBS_214_EN

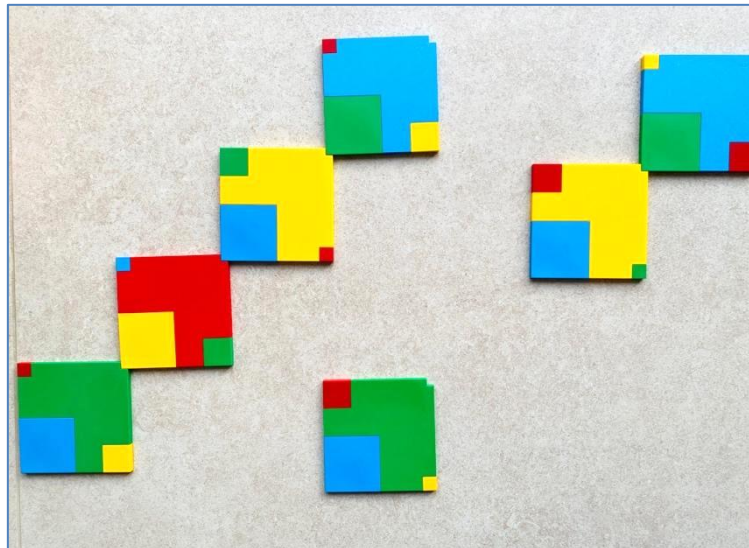

Author's name and institution: **Edith Debrenti**, Partium Christian University, Oradea, Romania

Formal and/or non-formal educational setting: **Both**

Most relevant age group: **6-8 years old**

Description of the idea / problem / exercise: **Find the missing element!**

The child should find which element is missing in the shape on the right by observing and comparing the two arranged shapes, identify the missing element, and then complete the shape on the right to match the one on the left.

- *Why this exercise is good:* It develops observational skills, attention to small details, and memory. In addition, children enjoy themselves during the game and learn actively.
- *Has anyone tried this? If yes, when and where?:*
- *Notes:* After completing the two shapes, they will not be identical, only similar; the base color and the color of the larger square will match, respectively. The game can continue by highlighting a different element, and in the same way, finding the missing element.
